Washing performance	50x wash at 60°C

Orange-Silver aramid FR reflective trim offers excellent flame retardant protection proven by NFPA 2112 / EN 469 certificates. It is specially designed for High Visibility and to ensure maximum protection of people working at the risk of flame, sparks or open fire. It can be sewn onto FR workwear or firefighters uniform.

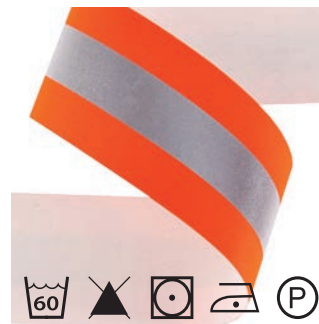

EN 20471

EN 469

This Reflective Material is a Aramid Fabric coated with a layer of resin with numerous glass micro-lenses impregnated with a special glue into this layer. The light reflects from these micro-lenses and comes back to a car (or other source of light) making the person wearing reflective tape more visual in the dark.

XM SilverLine Reflective tapes and films will have longer life if you follow our care instructions.

Type of work environment, exposure conditions and maintenance have an impact on reflective performance.

Please test each tape according to appropriate care instructions required for the garment.

High-visibility clothing made with reflective material should be maintained in good condition and inspected regularly for damage or deterioration.
